Investment Objective

The primary objective is long-term capital growth, with a secondary objective of capital preservation.

Investment Strategy

Invests in individual equities, primarily US with some non-US, and fixed income securities. Manning & Napier employs an equity range of 40% to 70%. The equity range is designed to provide the opportunity to position investors for growth during favorable markets, but just as importantly, help mitigate risk during more adverse market conditions when the risk of experiencing an unrecoverable loss is elevated.

Performance data quoted represents past performance and does not guarantee future results. Performance for periods greater than one year is annualized. The investment return and principal value of an investment will fluctuate, so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be higher or lower than that quoted; investors can obtain the most recent month-end performance at www.manning-napier.com or by calling (800) 466-3863.

Inception performance is based on the Pro-Blend® Extended Term Series Class S inception of 10/12/1993. For periods through 03/28/2008 (the inception date of the Class I shares), performance for the Class I shares is based on the historical performance of the Class S shares. Because the Class I shares invest in the same portfolio of securities as the Class S shares, performance will be different only to the extent that the Class S shares have a higher expense ratio.

A Word About Risk

All investments involve risks, including possible loss of principal. Because the fund invests in both stocks and bonds, the value of your investment will fluctuate in response to stock market movements and changes in interest rates. Investing in the fund will also involve a number of other risks, including issuer-specific risk, foreign investment risk, and small-cap/mid-cap risk. Investments in options and futures, like all derivatives, can be highly volatile and involve risks in addition to the risks of the underlying instrument on which the derivative is based, such as counterparty, correlation and liquidity risk. Also, the use of leverage increases exposure to the market and may magnify potential losses.

Definitions

Alpha: A measure of an investment's performance relative to a benchmark index. It represents the excess return of an investment compared to the return of the benchmark.

Beta: A measure of an investment's volatility relative to the overall market.

Standard Deviation: A statistical measure of the dispersion of returns for a given investment. It quantifies the amount of variation or volatility from the average return.

Sharpe Ratio: A measure of risk-adjusted return, calculated by subtracting the risk-free rate from the investment's return and then dividing by its standard deviation.

Credit quality ratings: Are measured on a scale that generally ranges from AAA (highest) to D (lowest). Not Rated (NR) is used to classify securities for which a rating is not available. Credit quality ratings reflect the median of Moody's Investors Services and Standard & Poor's ratings. Data obtained from Bloomberg.

The 40/15/45 Blended Benchmark (Blended Benchmark) is 40% MSCI USA Investable Market Index (IMI), 15% MSCI ACWI ex USA Index (ACWI ex US), and 45% Bloomberg U.S. Aggregate Bond Index (BAB), beginning 06/01/1994. Prior to this, the Benchmark shown consisted of 40% MSCI USA, 15% ACWI ex US, and 45% BAB. IMI is designed to measure large, mid, and small-cap representation across the US market. The Index is denominated in U.S. dollars. The Index returns are net of withholding taxes. They assume daily reinvestment of net dividends thus accounting for any applicable dividend taxation. Index returns provided by Bloomberg. ACWI ex US is designed to measure large and mid-cap representation across 22 of 23 Developed Markets countries (excluding the U.S.) and 24 Emerging Markets countries. The Index is denominated in U.S. dollars. The Index returns assume daily investment of gross dividends (which do not account for applicable dividend taxation) prior to 12/31/1998, as net returns were not available. Subsequent to 12/31/1998, the Index returns are net of withholding taxes. They assume daily reinvestment of net dividends thus accounting for any applicable dividend taxation. Index returns provided by Bloomberg. Index returns provided by Bloomberg. BAB is an unmanaged, market value-weighted index of U.S. domestic investment-grade debt issues, including government, corporate, asset-backed and mortgage-backed securities with maturities of one year or more. Index returns provided by Intercontinental Exchange (ICE). The MSCI USA Index is a free float-adjusted market capitalization index designed to measure the performance of large and mid-cap segments of the U.S. market. The Index is denominated in U.S. dollars. Index returns provided by Bloomberg. The returns of the indices do not reflect any fees or expenses. Returns provided are calculated monthly using a blended allocation. Because the fund's asset allocation will vary over time, the composition of the fund's portfolio may not match the composition of the comparative indices. Mid-month performance is not available for the benchmark; performance provided from the first day of the month in which the Fund inception.
